Benjamin Roedell

Software Architect and Engineer
Tampa, FL
benrobot.github.io linkedin.com/in/benjaminroedell github.com/benrobot stackoverflow.com/users/3166133

SUMMARY

I am a software architect and engineer. I work across application development, cloud infrastructure, and security, specializing in SOLID, clean code, and unit and integration testing.
I raise delivery quality through automation and advocate for simple, maintainable architecture. I promote AI tools and services, including Cursor and Cursor Agents, that improve products and productivity, and I keep the coding and delivery practices that make those tools effective.
Native English and Spanish speaker.
Developed and performed training in automated testing for over 100 developers.
Fixed vulnerabilities such as unauthenticated access and SQL injection, applying skills from security training.

CERTIFICATIONS

DEV541: SANS Secure Coding in Java/JEE: Developing Defensible Applications April 2019 (certified August 2019)
DEV544: SANS Secure Coding in .NET: Developing Defensible Applications April 2018 (certified August 2018)

TECHNOLOGIES

Java · Gradle · C# · AspNetCore · Redis · JavaScript · TypeScript · Angular · React · Playwright · Cursor · Powershell · JUnit5 · SQL · Snowflake · Docker · Kubernetes · AWS/Azure · Datadog · CloudFormation · NestJS · RabbitMQ · MongoDB · Snyk · OAuth

WORK EXPERIENCE

Solution Architect, Mad Mobile, Tampa, FL Sep 2023 – Present
Restaurant and Retail Software

- Encourage the coding and SDLC practices that make LLMs more effective, including steering QA from AI-run manual testing to Playwright automation after that approach proved expensive
- Enable cloud-based development environments so Cursor and Cursor Agents are not limited to a single local machine, letting the team work on multiple tasks without slowing those machines
- Standardize build automation, Snyk security testing, unit and integration tests, code review, release versioning, and deployment automation across old and new applications
- Rewrite ShopCPQ in NestJS, replacing MongoDB queues with RabbitMQ and in-memory timers with Kubernetes jobs
- Make JSDoc type safety and unit test coverage standard for JSRunner implementation repositories
- Guide integration choices across n8n, Prismatic, and NestJS while supporting retail customers such as Knitwell Group and West Marine
- Carry OAuth research for Concierge through to an implementation decision, and steer Concierge toward faster client integration, including Concierge AI
- Move Neo toward reproducible builds and deployments
- Initially integrate Neo and Concierge AI with Datadog Real User Monitoring (RUM)
- Partner with the Cloud team on production ownership, with a clear split between prod and non-prod and explicit access controls
- Integrate Multi-Location Reporting with Snowflake, and support Enterprise Solutions, CAKE, MenuPad, and Concierge
- Mentor 7 retail engineers and advocate for simple, maintainable architecture in design decisions

Senior Software Developer (Contractor) Jan 2019 – Present (part-time since Aug 2023)
Baha'i National Center, Wilmette, IL · Not-For-Profit Religious Organization

- Design automatic API documentation from unit test execution
- Create SAML Identity Provider on existing authentication system
- Develop and maintain Azure Functions, ASP.NET Core/MVC and SOAP services (C#)
- Encourage best practices (e.g. SOLID, clean code, etc) and use of DI for IoC in .NET
- Optimize REST services from controller to database via LINQ and EF Core
- Convert UI pages from jQuery to React and JavaScript to TypeScript
- Consolidate source code repositories and CI/CD solutions for automated testing/linting
- Automate builds using Azure DevOps Build and Release Pipelines

- Integrate ARM templates to streamline deployments
- Alert and troubleshoot using Azure App Insights' KQL (Kusto Query Language)
- Update stored procedures (SQL Server) and write SQL unit tests to verify functionality

Senior Software Developer (Contractor), Flexsible, Tampa, FL Jun 2021 – Sep 2023

Smart Contract Development Services

- Create Smart Contract using Solidity and HardHat including automated unit tests
- Reduce gas by implementing cloning of Smart Contracts
- Troubleshoot Hyperledger FireFly dynamic creation of supernodes
- Investigate Proof of Concept for Binance Smart Chain real time notifications
- Implement Smart Contracts using both Truffle and Hardhat (Solidity)
- Automate CI/CD using GitHub Actions and AWS CloudFormation for NodeJS apps
- Provide sample PHP for submitting signed token transfer requests to Ethereum

Senior Software Developer, PODS, Clearwater, FL Jul 2019 – Jul 2021

Moving and Storage

- Decouple legacy WCF based applications from Microsoft AX 2009 to enable smooth upgrade from Microsoft AX (C#)
- Troubleshoot issues related to performance and caching (Redis)
- Refactor common code into Nuget packages published on Sonatype Nexus via Bitbucket pipelines (DevOps, C#)
- Participate in PCI DSS gap remediation

Senior Software Developer, Applicant Insight, New Port Richey, FL Sep 2015 – Jul 2019

Background Investigation and Applicant Processing

- Debug and diagnose obscure race conditions in various environments (JavaScript, Java, SQL)
- Maintain and upgrade legacy Java based systems while launching new systems using .NET (C#, XUnit, Angular, TypeScript)
- Integrate credit card / ACH payment system to allow applicants to pre-pay client specified fees (Java, C#)
- Improve Java coding practices by implementing custom logging, unit testing, and static code analysis (slf4j, junit4, junit5, ErrorProne, SonarQube)
- Create Gradle build scripts for legacy Java applications with custom tasks for local deployment, build versions, and packaging (Java, Gradle, Groovy)

Software Architect (Part-Time), Qualityze Inc., Tampa, FL Jul 2015 – Jan 2019

Qualityze Systems for Regulated Industries

- Build Quality System as Salesforce managed package (Apex, VisualForce)
- Implement PDF manipulation using Java running on Heroku uploading to various salesforce orgs (Java, PdfBox, Apex)
- Diagnose slow pages in Salesforce and design method to reduce load time

Software Developer (Contractor), iReward.io, Trinity, FL Dec 2018 – Jan 2019

Blockchain Reward System

- Create blockchain reward system on TRON Network (C#, Typescript, Angular)

Software Engineer, CAE USA Inc, Tampa, FL Jan 2013 – Sep 2015

Military Training Simulation with Active Security Clearance

- Deploy and maintained central build automation within secured IT environment (Opscode Chef)
- Write Wireshark dissector for network communication with USMC Tactical Environment (Lua)
- Coordinate and present training for software engineers on Automated Testing, Static Code Analysis, and Software Product Lines (Fitnesse, GoogleTest, Selenium)
- Support multiple projects simultaneously; not the norm for recent hires (C++, C, Ada with Linux)

Quality Assurance and Regulatory Affairs Manager / Software Developer Dec 2003 – Jan 2013

IsoAid, LLC, Port Richey, FL · Medical Device Manufacturer

- Perform both software and equipment validation on critical systems
- Develop and execute validation protocol for electronic signatures
- Submit and receive 510(k) submissions to the FDA
- Submit and receive medical license applications to Health Canada and EU notified body
- Create and execute sterilization validation protocols for both Ethylene Oxide and Steam sterilizers

EDUCATION

Bachelor of Science, Computer Engineering

University of South Florida · 2012
